CAREER OBJECTIVE

Detail-oriented Full-Stack Developer with hands-on expertise in the MERN stack, Python, and workflow automation (n8n, Cloudinary), seeking to join as a Software Development Engineer / Full-Stack Developer to build scalable, production-grade web applications. Brings a strong foundation in data structures and algorithms, practical experience shipping end-to-end features, and a growing specialization in applied machine learning — aiming to contribute clean, efficient code from day one while progressing toward AI/LLM-integrated product development.

EDUCATION

B.Tech in Data Science *2024 – 2028*

Noida Institute of Engineering and Technology (NIET), Greater Noida

Senior Secondary (Class XII) – 78%

MSPS

Secondary (Class X) – 96.7%

MSPS

PROJECTS

ChopAI – AI Background Remover

- Built an automated background-removal tool using n8n as the workflow/backend engine, orchestrating image processing without a traditional custom backend.
- Integrated Cloudinary for image upload, transformation, and storage, enabling a fast and scalable image-processing pipeline.
- Designed the end-to-end workflow to accept an image, trigger automated background removal, and return the processed result via automated API calls.

Fake News Predictor – Machine Learning Project

- Developed a machine learning model to classify news articles as real or fake using natural language processing techniques.
- Built and evaluated the model as part of an academic project at NIET, covering data preprocessing, feature extraction, and model evaluation.

TECHNICAL SKILLS

Languages: C++, Python, JavaScript

Web Development: MERN Stack (MongoDB, Express.js, React, Node.js)

Machine Learning: Python-based ML workflows, model building and evaluation

Automation & Tools: n8n workflow automation, Cloudinary, Git/GitHub

Core Focus: Data Structures & Algorithms (DSA)

AREAS OF INTEREST

- Full-stack web development
- Competitive programming and DSA
- Applied machine learning and large language models (LLMs)
